Additional Kill Claims for Pure & Clean™ Disinfectant/Sanitizer

Nixa, MO – Pure & Clean LLC with its product line Pure & Clean™ – a fast-growing brand of a new technology line of products for hospital, commercial, household, family – recently received notification from the EPA that their Disinfectant/Sanitizer product has added new kill claims of several important viruses, and yeast.

Pure & Clean™ Disinfectant/Sanitizer had already been named an EPA registered hospital disinfectant, with kill claims for several bacteria and viruses. Pure & Clean LLC's recent kill claim designations are; Adenovirus, Norovirus or Norwalk Virus, Rhinovirus, Rotavirus, Respiratory Syncytial Virus (RSV), and Candida Albicans. Pure & Clean™ Disinfectant/Sanitizer original kill list has been proven effective against C-Diff, E coli, Listeria, Pseudomonas, Salmonella, MRSA, VRE, Tuberculosis, HIV, Influenza A Virus, and H1N1.

“County health departments are getting a new weapon against Norovirus and it’s made in Nixa, Missouri,” Trent Freeman, President of Pure & Clean LLC said.

Pure & Clean™ Disinfectant/Sanitizer is the alternative to harsh toxic disinfectants in the healthcare market place. Now, hospitals and long-term care facilities can rid themselves of MRSA, C-diff spores, TB, and Norovirus. Norovirus is also known as the “puking disease,” infamous for its fast transmittal and violent symptoms. Norovirus/Norwalk virus has forced the closing of restaurants, cancelation of cruises, caused the loss of time and commerce, and jeopardized the health of the elderly. Pure & Clean™ Disinfectant/Sanitizer kills many of the CDC’s list of antibiotic resistant “Super-bugs,” kills C-diff spores, and listed enveloped and non-enveloped viruses.

“Our customers can now create a clean, safe environment for their patients, customers, and employees without the risks associated with traditional disinfectants,” Freeman added.

Pure & Clean™ Disinfectant/Sanitizer is now one of the most effective disinfectants in the marketplace, can be diluted as a “no rinse” sanitizer, and it is safe enough to dispose of in sanitary sewers without prior approval from the EPA. Safe and effective, Pure & Clean™ Disinfectant/Sanitizer is the solution for any business whose main concern is the health and well-being of its customers and employees.

Pure & Clean LLC line of products contain hypochlorous acid and are formulated with varying concentrations to create products that include a FDA 510(k) wound and skin care medical device, along with other products for commercial and household cleaning, disinfection/sanitizing, and animal care products.
